

Coastal Resilience Laboratory and Accelerator Center

The Coastal Resilience Laboratory and Acceleration Center (the Center)—an independent 501(c)(3) organization— will serve as the nexus for technological, organizational and innovation around community revitalization, water management, resilience measurement, port, Naval Station, and other water-sector business related resilience challenges.

Managed by a Board of Directors inclusive of community and private sector partners and the Commonwealth's major universities, the Center will be staffed by a small, agile team of entrepreneurs skilled at identifying problems, matching them with potential solutions, working with companies to create product and moving product quickly to market.

The Commonwealth's and its partners' direct commitment of \$7,000,000 for the Coastal Resilience Laboratory and Accelerator Center. HUD funds will provide an additional \$5,000,000 for the Center.

Here are the potential locations for the Coastal Resilience Laboratory and Accelerator Center. The Coastal Resilience
